Physical bound known independently of the sample?
no
Framework does not apply
yes
Exact endpoint values present?
no
Continuous set: clip and measure on [0, 1]
yes
Endpoint-dominated (little interior mass)?
yes
Classification + conditional regression
no
Both endpoints and interior substantial?
no
Continuous HPD is usually sufficient
yes
Report $\bar{A}_\lambda$ and $\lambda^\star$. Is $\lambda^\star$ large for relevant endpoint costs?
no
Continuous HPD set
yes
Atom-aware routing worth considering
